TECHNICAL EXPERIENCE

Projects

- Vestel Asist** (2012 - Now). I have created a range of components for a location-based platform, including a map feature that allows users to view their visits, a planning component for routes and visits, a kanban feature, and a visit report page for easy route editing. Additionally, I designed a poll component for filling in data on visits, tailored to different audiences and profiles.
- EOYUNCUM** (2021). Eoyuncum is a gaming platform that allows gamers to sell hourly or per game wins and create communities. As the creator of the portal, I utilized SignalR on C# to enable live chat interaction and developed the angular frontend from scratch.
- Sunexpress Webform** (2011 –Now). Through the use of various FormTitan features, I have developed a webform that allows users to create fully automated compensation and lost content requests that are sent directly for approval. Additionally, I implemented the functionality for viewing and updating old cases.
- CCI Cokeport** (2012 –Now). I have successfully implemented the design created by the design team for the Salesforce platform, using highly accessible components with full responsiveness. In addition, I fine-tuned detailed animations with CSS, utilizing JavaScript and jQuery to meet their needs.
